

SuperOrbit presents you

VectorSheets

Turning complex spreadsheet processes into fully automated, error-free workflows.

The World Before VectorSheets

For forty years, work has revolved around a familiar routine.

Open a spreadsheet. Type formulas. Copy data to slides. Write reports manually.

These tools were revolutionary once.

But today, they feel heavy, slow, fragmented, and outdated.

The world moved forward.

Work tools did not.

The Real Problem

People spend more time *fixing* work than *doing* work.

Teams lose hours every week managing files, formulas, and versions.

Nothing is connected. Nothing updates together.

Nothing feels simple.

Traditional tools slow people down.

And today, speed is everything.

The Opportunity

For the first time in decades, we have the chance to redesign the core of work.

Not patch it.

Not add AI on top of it.

But rebuild the foundation itself.

Around intelligence. Around simplicity. Around people.

The Idea

Vector AI asks a simple question:

What if work could happen as fast as you can think?

You tell it what you want a model, a report, a forecast, a plan and Vector AI builds it with you. No formulas. No clutter. No friction.

The Vector Experience

You open Vector AI.

It's calm. Clear. Focused.

A single prompt bar.

Ask for a revenue model, a hiring plan, a market analysis

And it appears.

Accurate, structured, and ready to use.

Everything updates together.

Everything stays in sync.

What Vector AI Can Do

- Build spreadsheets without formulas
- Write reports without typing
- Create presentations without design
- Connect data without engineering
- Automate tasks without scripting
- Explain results without confusion

It feels less like software. More like a creative partner.

How It Works (Simplified)

Vector AI uses three intelligent layers.

A Planner that understands intent.

An Executor that performs tasks.

A Verifier that checks for accuracy.

Every action is explained.

Every step is transparent.

Every result is trusted.

plain english prompt —> AI agent's action —> Verification —> Whole Task done

Why We Win

We are not building “AI for spreadsheets.”

We are building a **new operating system for work.**

Old tools depend on manual effort.

Add-on AI is a temporary patch.

Vector AI is intelligence at the core.

A complete redesign, not a cosmetic upgrade.

Market Size

The productivity market is vast and universal.

More than 800 million people use spreadsheets and office tools daily.

Businesses spend billions each year on software to analyze, plan, and communicate.

Even a small share of this market becomes a multibillion-dollar company.

But the real opportunity is bigger — replacing the entire foundation these tools sit on.

Who This Helps

- Startups running forecasts and plans
- Small businesses making decisions
- Mid-size teams managing operations
- Enterprises with complex data workflows
- Analysts, PMs, marketers, founders, students

Vector AI fits wherever people want speed and clarity.

Why Teams Will Switch

Teams switch when:

- Something saves time
- Something reduces errors
- Something is easier to use
- Something feels modern

Vector AI delivers all four.

It makes Excel feel like the rotary phone of software.

Business Model

Simple and scalable.

Free tier for individuals.

Affordable plans for teams.

Enterprise contracts for large organizations.

Additional revenue from AI usage, integrations,
and a template marketplace.

Predictable, high-margin SaaS.

Financial Outlook

Year 1: Build, test, and run pilot customers

Estimated revenue: low, focused on learning

Burn: 1.6M–2.0M USD for full 12-month runway

Year 2: Launch Pro and Enterprise plans

Projected annual revenue: 1–3M USD

Year 3: Scale across industries

Projected annual revenue: 10–20M USD

High growth. Low churn. Strong expansion revenue.

Traction Path

Step 1 — Private pilots

Step 2 — Early design partners

Step 3 — Public Beta

Step 4 — Teams adopting across Finance, Ops,
Marketing

Step 5 — Enterprise expansion

Step 6 — Marketplace for templates and agents

This is the path to becoming a default tool.

The Competition

Excel and Sheets are manual.

Copilot and Gemini are add-ons.

Paradigm and others are early experiments.

Vector AI is a new category:

An AI-native workspace where data, text, and decisions live in one place and in just one prompt Hours of work is done in seconds.

Why We Will Lead

We are building around intelligence, not around legacy formats.

Our design is simple enough for anyone and powerful enough for enterprises.

Our system learns, adapts, and explains.

Once teams switch, they will never return to old tools.

This is the new standard for modern work.

The Vision Ahead

Today, Vector AI handles spreadsheets, documents, and presentations.

Tomorrow, it becomes the operating system for work —

where planning, communication, and execution happen in one unified, intelligent environment.

Work will no longer be done in tools.

Work will be done in flow.

Why This Is Hard to Copy

Every great shift in computing begins with a new way of thinking.

Vector AI is that shift.

It frees people from complexity, accelerates ideas, and gives back time.

We aren't building another app.

We are building the future foundation of work.

Vector AI

Work Accelerated.

What We Ask From Investors

We are not raising money to build a prototype.
We are raising money to build a foundation.
We are seeking a funding of \$2.5 million dollars.
A 12-month runway to create the first version of
Vector AI, validate with real teams, and prepare
for scale.
This is a product that can reshape the future of
work.
We invite you to be part of that journey.

Our Philosophy

Every major shift in computing began with a new way of thinking.

The Mac redefined personal computing.

The iPhone redefined communication.

AI will redefine work.

Vector AI is here to lead that shift.

Not with noise.

But with clarity

We believe in simplicity.

We believe in clarity.

We believe great products disappear into the background and let users shine.

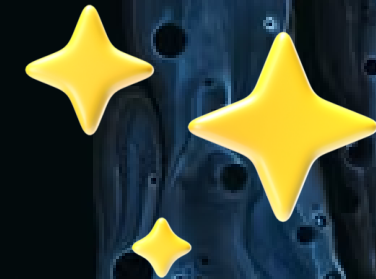

Vector AI is built with that mindset.

Taste matters.

Details matter.

Every pixel, every sentence, every workflow must feel intentional.

Thank You
